WAGE EARNERS OF CANADA AT WORK AND NOT AT WORK ON JUNE 1, 1931,

TOGETHER WITH CAUSES GIVEN BY WAGE EARNERS REPORTING AS

"NOT AT WORK"

Introduction

The group of "wage earners" is one of three into which the "gainfully occupied" population is divided at the census. The other two are described as "employers" and as workers "on own account", respectively, the workers "on own account" including such classes as farmers, country blacksmiths, small storekeepers, doctors, lawyers and others who give their own time and labour to their occupation, and do not employ others therein. The "wage earners" are much the largest of the three groups, and, as defined by the census, include each and every person "who works for salary or wages, whether he be the general manager of a bank, railway or manufacturing establishment or a day labourer".

At the census of June 1, 1931, a comprehensive investigation was made of the problem of "unemployment" among the wage earners of Canada. In the first place, every wage earner in the country was asked whether or not he was at work on the date of the census, Monday June 1, 1931, and those who answered in the negative were further asked the reason for not being at work on the above date, the reasons to be stated under such headings as "no job", "temporary lay off", "strike or lockout", "illness", "accident", etc. This investigation was made in order to get a clear and sharply defined conspectus of the employment situation at a particular point of time.

In the second place, every wage earner in the country was asked to state how many weeks he had been out of work during the twelve months preceding the date of the census - that is, how many weeks he had been out of work between June 1, 1930 and June 1, 1931, together with the number of weeks out of work for each of the specified causes, "no job", "temporary lay off", "illness", "accident", "strike or lockout", "other causes". A comprehensive analysis of the information secured under this second heading

classified by occupation, birthplace, citizenship, etc., is in progress.

The present bulletin deals with the first of the two enquiries - the analysis of the wage earning population as "at work" or "not at work" on a specified date - the official date of the census, June 1, 1931 - and the causes stated for not being at work on that date.

The bulletin falls into two parts. Part I is concerned with Dominion and provincial totals of wage earners at work and not at work on June 1, 1931, and with the reasons assigned by the latter for not being at work on that day. Part II is a record of those at work and not at work on June 1, 1931, in every urban community of 1,000 population and over in the Dominion. In Part II, chief attention is devoted to wage earners of 20 years of age and over who are out of the apprentice stage and in most cases have others dependent upon them. In this part the tables give the number at work and not at work and do not enter into any analysis of the causes, since this analysis has been made in Part I in sufficient detail for certain broad conclusions as to the reasons for not being at work to be drawn. Totals are given by provinces for cities of 30,000 and over, urban communities of between 5,000 and 30,000, and smaller urban communities of between 1,000 and 5,000 population.

PART I

Wage Earners "At Work" and "Not at Work" in the Dominion
and the Provinces on Monday, June 1, 1931

The grand total number of persons in the Dominion coming within the census definition of "wage earners" was 2,564,879 at the date of the census. Of this total, 2,093,211 or 81.39 per cent, were actually at work on the date of the census, while 471,668 or 18.61 per cent were not at work on the date of the census. In other words, out of every 10,000 wage earners in the Dominion, 8,139 were at work and 1,861 were not at work on June 1, 1931. Of those not at work, 392,809 stated that they were not at work owing to having "no job". In the consideration of this figure it has to be remembered that even in times of great industrial activity there are always many thousands of workers "between jobs", while many thousands more are casual labourers, who may have "no job" to-day but may be employed to-morrow. This figure of 392,809, being 15.32 per cent of all the wage earners of the Dominion, or 1,532 out of every 10,000, may be regarded as giving the number of "the unemployed", in the ordinary meaning of the term, as at the date of the census. Approximately five out of every six who were not at work on June 1, 1931, gave the reason as "no job".

The other reasons advanced by wage earners for not having been at work on June 1, 1931, were of less importance. The considerable total of 42,443 reported that they were not at work owing to "temporary lay off". This number, however, was only 1.66 per cent of the wage earners of the Dominion or one out of every sixty wage earners in the country. Further, these wage earners had a job to go back to, so that their position was quite different from that of those reporting "no job". "Strike or lockout" was given in only 379 cases as the reason for not being at work on June 1, so that only about one out of every 7,000 wage earners in the country was not at work as the result of an industrial dispute - an excellent record in the circumstances.

Personal reasons were assigned by those not at work on June 1, 1931, in 30,177 cases, including 25,718 cases of illness and 4,459 cases of accident. The 25,718 constitute about one per cent of the grand total

number of wage earners in the country, and this might be taken to indicate that the average toll taken by illness among our wage-earning population is about one per cent of normal full time or about three days in the working year. "Accident" cases were responsible for about one-sixth of one per cent of the wage earners not being at work on the date of the census - one person out of every six hundred. Thus "accident" would appear to be a minor cause of loss of time, averaging half a day per wage earner per annum.

Various reasons not lending themselves conveniently to tabulation were assigned by 2,277 persons for not being at work on June 1, 1931, while in 3,583 cases the reason for not being at work could not be obtained. As these two groups taken together were less than one-quarter of one per cent of the total number of wage earners, the lack of definite information in their cases does not materially affect the delineation of the general employment situation on the date of the census.

Sex Distribution of Wage Earners at Work and Not at Work
on June 1, 1931

Heretofore the total wage earning population of the Dominion has been considered, without distinction of sex. When that distinction is made, as in Table I on page 6, it is at once observed that the females "not at work" on June 1, 1931, are a much smaller percentage of the total female wage earners than the males "not at work" are of the total male wage earners. Out of 2,017,606 male wage earners in Canada on the date of the census, 1,594,612 or 79.03 per cent of the total were at work and 422,994 or 20.97 per cent were not at work. On the other hand, out of a total of 547,273 female wage earners in Canada at the date of the census, 498,599 or 91.11 per cent were at work and only 48,674 or 8.89 per cent were not at work. Thus the percentage "not at work" among male wage earners was considerably more than twice as large as among female wage earners.

If the wage earners with "no job" at the date of the census are compared - the really "unemployed" - the same conclusion is reached. Out of 2,017,606 male wage earners resident in Canada at the date of the census, 356,549 or 17.68 per cent, or rather more than one-sixth, had

"no job"- were unemployed at the date of the census. Out of 547,273 female wage earners, however, only 36,260 or 6.63 per cent of the total had "no job". In other words, one out of every six male wage earners and one out of every fifteen female wage earners was unemployed at the date of the census.

Reasons other than "no job" were given for not being at work on June 1, 1931, by 3.29 per cent of all male wage earners and by 2.26 per cent of all female wage earners. Among these reasons "temporary lay off" accounted for 1.83 per cent of all male wage earners and 1.00 per cent of all female wage earners not being at work on the date of the census. Again, "strike or lockout" accounted for the absence from work of 353 males and of only 26 females.

Among the personal reasons for not being at work, "illness" bulked equally large among male and among female wage earners, 1.00 per cent of each sex being not at work on June 1, 1931, for this reason. On the other hand, the greater hazards to which males are subjected in the course of their employment and outside of it are shown by the fact that 0.21 per cent of all male wage earners and only 0.04 per cent of all female wage earners were not at work on June 1, 1931, as a result of accidents.

Preliminary general results of the investigation of wage earners at work and not at work on June 1, 1931, and the reasons given by those not at work are given for the Dominion as a whole by numbers and percentages, in the following table.

Table I - Total Number of Wage Earners in Canada at Work and Not at Work
on June 1, 1931, with Causes for Wage Earners not being
at Work on that Date

(Preliminary Figures)

	<u>Total Wage Earners</u>			<u>P.C. of Wage Earners</u>

Comparison by Provinces of Causes for Not Being at Work

While in the Dominion as a whole, 18.39 per cent of all wage earners of both sexes were not at work on June 1, 1931, the corresponding figure for the provinces varies all the way from 6.79 per cent in Prince Edward Island to 24.69 per cent in British Columbia. Such wide differences make a closer analysis necessary.

"No Job"

First, those of both sexes who have "no jobs" - the really unemployed - are shown in Table II to vary in actual numbers all the way from 620 in Prince Edward Island to 100,442 in Quebec and 130,442 in Ontario. When we refer to the percentage figures of Table III, we find that the variation is from 5.04 per cent of all wage earners in Prince Edward Island to 21.55 per cent in British Columbia. The Prairie Provinces show higher percentages of "no jobs" than the Dominion percentage of 15.32, Manitoba showing 18.84 per cent of all wage earners as having no jobs at the date of the census, Saskatchewan 18.10 per cent and Alberta 17.04 per cent. On the other hand, Quebec with 14.49 per cent and Ontario with 13.52 per cent of jobless at the date of the census were below the average of the Dominion. New Brunswick with 16.79 per cent of jobless, was distinctly worse off than Nova Scotia, which had only 12.03 per cent of jobless on June 1. These figures indicate the relative position of the provinces with regard to employment and unemployment.

"Temporary Lay Off"

"Temporary lay off" accounted for 1.66 per cent of all wage earners (1.83 per cent for males and 1.00 per cent for females) being away from their work on Monday, June 1, 1931, the total of 42,443 including 36,971 males and 5,472 females. The highest percentage of "temporary lay off" were found in Nova Scotia with 5.08 per cent of all wage earners and 6.12 per cent of all male wage earners "laid off". Alberta and British Columbia reported 3.33 per cent and 1.70 per cent respectively of all wage earners "laid off". In all three provinces a large proportion of those temporarily

"laid off" were employed in the coal mines. In the chief industrial provinces of Ontario and Quebec, the percentages of "temporary lay off" were 1.78 and 0.88 respectively.

"Strike or Lockout"

The only province where the number of wage earners reporting themselves as not at work owing to "strike or lockout" was an appreciable fraction of the total working force was British Columbia, where nine per ten thousand of all male wage earners were not at work on June 1, 1931, for this reason. The actual number in this province not at work owing to differences with employers was 169.

"Illness"

"Illness", as a personal reason for absence from work, may be expected to account for a fairly even amount of absence from work throughout the various provinces. However, while the Dominion average is exactly one per cent of the total number of wage earners for both sexes as well as for males and females respectively, Nova Scotia shows 1.64 per cent of all males giving illness as the reason for not being at work on June 1, 1931. Quebec came next with 1.22 per cent of all males reporting absence from work as due to illness. Ontario was slightly below the Dominion average with 0.94 per cent of its male wage earners not at work on June 1, 1931, because of illness. In the Prairie Provinces the proportions were lower still, Manitoba showing 0.80 per cent, Saskatchewan 0.58 per cent, Alberta 0.65 per cent of male wage earners not at work because of illness. British Columbia was higher with 0.91 per cent of male wage earners not at work on account of illness. Doubtless the age distribution of the wage earners would go far to account for these differences. It may be noted that among female wage earners the differences between the provinces are smaller, the highest proportion of females not at work on account of illness being 1.18 per cent in Nova Scotia and the lowest 0.78 per cent in Saskatchewan, as compared with the Dominion average of 1.00 per cent. This would appear to be accounted for by a more uniform age distribution of female wage earners throughout the Dominion.

"Accident"

Among male wage earners, the highest percentages of "not at works" on account of accidents were found in British Columbia with 0.34 per cent and in Nova Scotia with 0.32 per cent not at work on June 1, 1931, owing to accidents, as compared with the Dominion average of 0.21 per cent, or 21 per 10,000 wage earners. The lowest percentages were found in the agricultural provinces, Prince Edward Island with 0.11 per cent and Saskatchewan with 0.12 per cent. Ontario and Quebec indicated 0.17 per cent and 0.19 per cent respectively not at work as the result of accidents. Lumbering and mining may account for the relatively high figures of British Columbia and lumbering and fishing for those of Nova Scotia.

Statistical Tables

The actual figures of wage earners at work and not at work on June 1, 1931, are given by province and by sex in Table II with the causes of absence from work. Table III gives percentages of wage earners at work or not at work for various reasons on the date of the census, and Table IV gives percentage figures showing how largely each of the causes for not being at work bulked with the 471,000 wage earners not at work on that day.

TABII II - WAGE-EARNERS OF CANADA AT WORK AND NOT AT WORK ON MONDAY, JUNE 1, 1931, BY SEX AND PROVINCE, WITH NUMBERS NOT AT WORK

FOR VARIOUS CAUSES
(Preliminary figures)

Province	Total number of Wage-earners	Number at work June 1st, 1931		Number not at work June 1st, 1931	CAUSES GIVEN BY THOSE NOT AT WORK						Causes not stated

PART II

Urban Wage Earners at Work and Not at Work on June 1, 1931

The wage earners of Canada are resident in proportionately greater numbers in the urban communities, while employers and workers "on own account" are proportionately more numerous in rural areas. Indeed many wage earners who reside outside of the urban communities find their daily work within them. The census, however, deals with people at their residence and allocates to Montreal, Toronto or any other urban community only those wage earners who are actually resident within the limits of the municipality.

The following tables are concerned, therefore, only with wage earners resident within the 533 urban municipalities of 1,000 population or over. Further, in these urban tables only the wage earners of 20 years and over are included as being past the apprentice stage and as having in the majority of cases other persons dependent upon them for support. Even when the wage earners of under 20 years are left out of account, we find that these 533 urban municipalities of 1,000 population and over, with an aggregate population of 5,160,901 or 49.73 per cent of the total population of Canada, had as residents within their bounds 1,544,014 wage earners of 20 years and over, or 60.2 per cent of all the wage earners of all ages in the Dominion of Canada. Further these same 533 urban municipalities had as nearly as can be estimated some 220,000 wage earners of under 20 years of age included in their population, so that their grand total population of wage earners may be estimated at 1,764,000 out of a grand total of 2,564,879 for the Dominion as a whole, or 68.8 per cent of the grand total.

The 533 urban communities of 1,000 population contained on June 1, 1931 an aggregate of 1,544,014 wage earners of 20 years and over, including 1,218,034 males and 325,980 females. Of these the total number not at work on June 1, was 290,177, 263,042 males and 27,135 females. Statistics of the reasons why these wage earners were not at work on June 1 have not yet been compiled, but if the proportions shown in Table IV for all Canada are used (84.29 per cent for males and 74.5 per cent for females) then about 221,700 male and 20,125 female wage earners of 20 years and over

in the 533 municipalities on the date of the census had "no job".

Generally speaking, the percentage of wage earners not at work was highest in the largest places, and this was true for both sexes. Thus, taking the three distinct classes of municipalities in Table I, the percentage of all wage earners not at work on June 1 was 17.71 in communities of 1,000 to 5,000, 17.92 in communities of 5,000 to 30,000 and 19.34 in communities of 30,000 and over. The corresponding figures for male wage earners were 19.97 per cent, 20.55 per cent and 22.37 per cent respectively, and for female wage earners 6.34 per cent, 6.52 per cent and 9.17 per cent respectively.

Finally, in the 533 urban communities as a whole, containing practically one half the population of the Dominion, the percentage of wage earners of 20 years and over of both sexes not at work was on June 1, 1931, 18.79 per cent as compared with 18.39 per cent for all wage earners of both sexes in the Dominion. The percentage of adult male urban workers not at work was 21.60 per cent as compared with 20.97 for the Dominion. The percentage of females not at work was 8.32 per cent as compared with 8.89 per cent for the Dominion. On the whole, then, it appears that urban male wage earners were rather less fully employed in urban communities than outside of them, and that female wage earners were rather more fully employed in urban communities than outside of them.

In this Part, Table I is a summary by province and sex of the aggregate number of wage earners and of wage earners "not at work" in cities of 30,000 and over, in cities and towns of between 5,000 and 30,000 population, and in towns and villages of 1,000 to 5,000 population. Table II gives the figures of total wage earners and of wage earners not at work in each of the 533 urban municipalities of over 1,000 population.
